Introduction

The Application Lifecycle Management Product Portfolio of SAP

SAP Solution Manager

available for hybrid customer solutions

Fully integrated ALM suite for
on-premise-centric medium and
larger customers

Focused Run

Application Operations for
service providers and
large / very large customers

SAP Cloud ALM

SAP S/4HANA Cloud

Starting with the Implementation
portal for cloud-centric small and
medium customers

Three Different Change Paces in Requirements-to-Deploy

Fix	
Trigger	Business disruption or standard change
Scope	Small
Process Impact	None
Approval	Individual
Deployment	Unbundled on request or bundled with release
Time to delivery	1 day – 1 week

Enhance	
Trigger	Improvement request
Scope	Medium
Process Impact	Minimal
Approval	Individual
Deployment	Bundled with release
Time to delivery	1 month

Portfolio to Project

S/4HANA Conversion Project Support provided with Focused Build SP06 as additional starting point for Requirements-to-Deploy

Innovate	
Trigger	Transformation projects, new solutions
Scope	Large
Process Impact	Significant
Approval	Pre-Approved
Deployment	Bundled with release
Time to delivery	3-12 months

Transparent Requirements-to-Deploy

Incremental Deployment with constant Feedback Loops with the Business

Releases synchronize project go-lives and ensure continuous delivery and integration.

Project to bundle deliverables
Multiple and parallel projects are possible

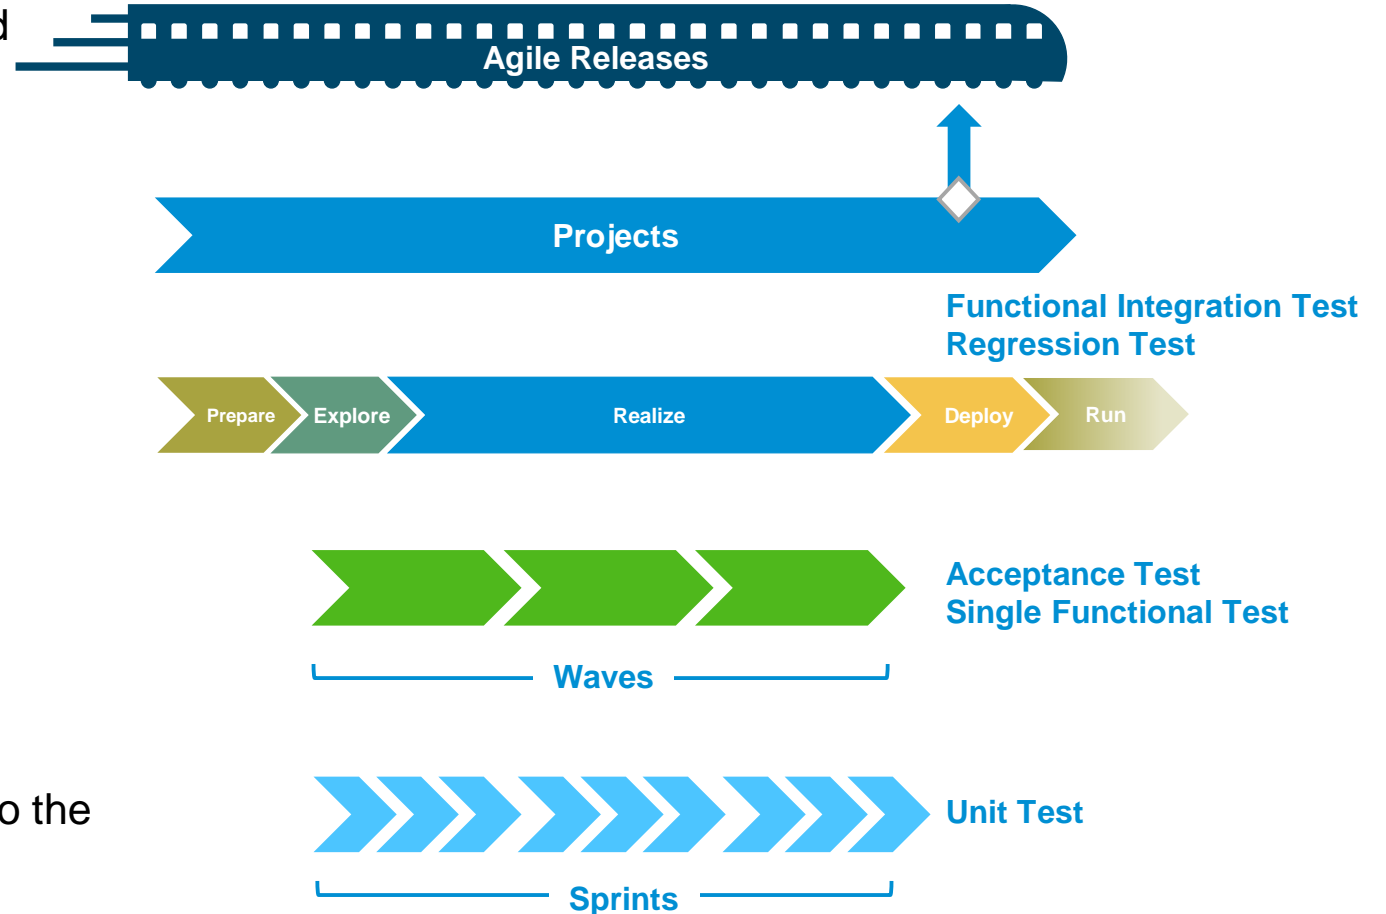

Phases ending with **Quality Gates**.
Short prepare and scope, incremental build

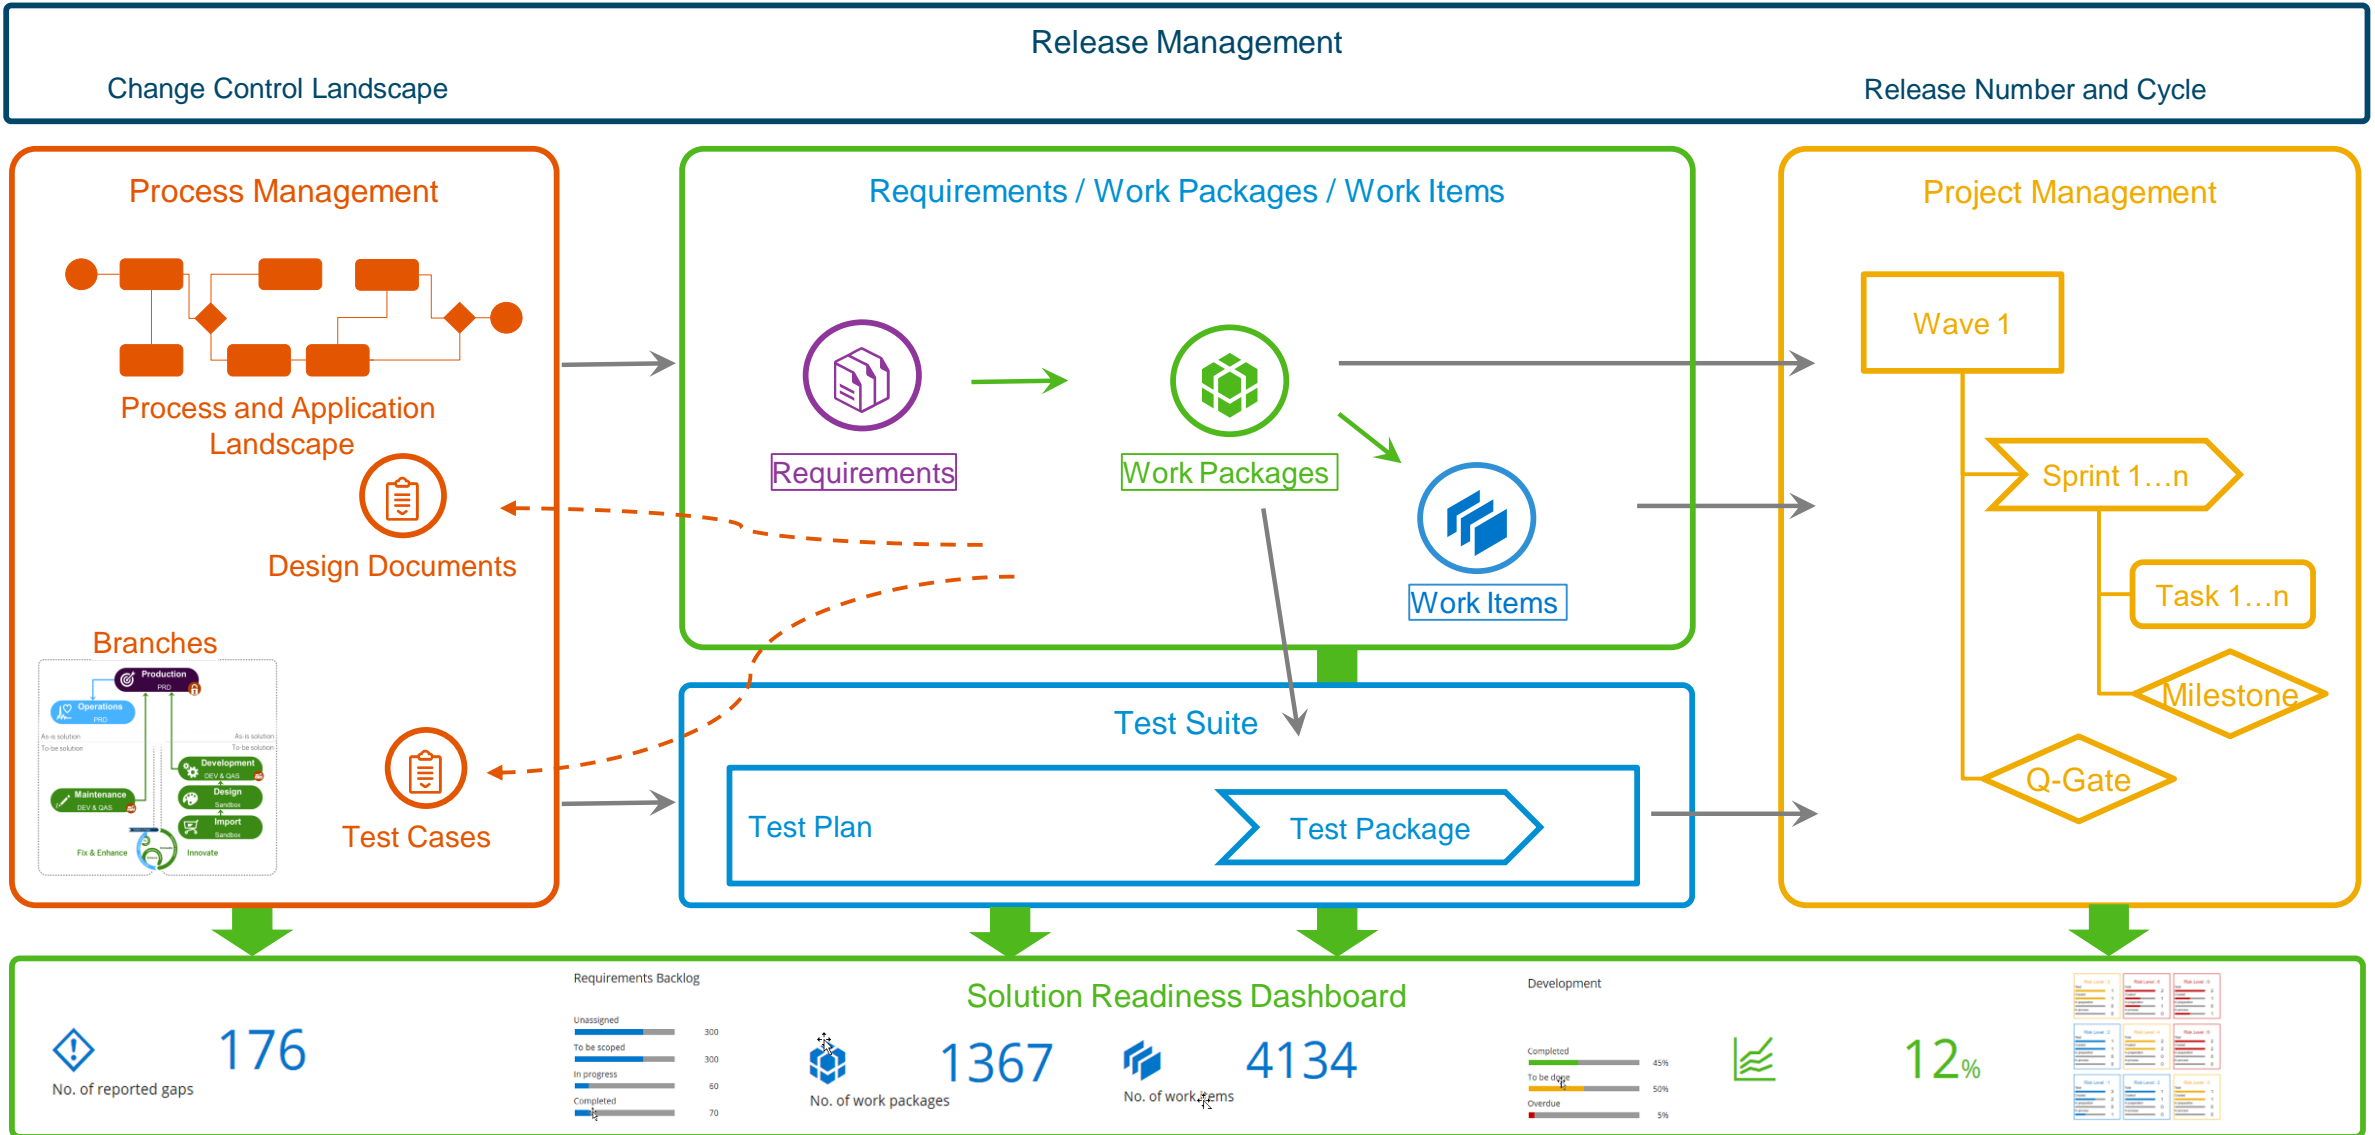

Waves ending with **Touch and Feel**
by the business (~ 8-12+ weeks)

Sprints with **Show and Tell** sessions to the
business (~ 2-4 weeks)

Focused Build – Architecture Overview and Integration Model

The Way to S/4HANA - Greenfield or Brownfield?

Greenfield

With a new implementation, you build a new SAP S/4HANA system.

Either you cut over to the new system (the so-called “big bang” scenario)

or

you migrate the individual business units sequentially from your legacy SAP ERP application to the new system (“a phased rollout”).

Brownfield

With a system conversion, you turn your existing SAP ERP system into an SAP S/4HANA system.

Technically, the system conversion is a one-step procedure with a single downtime.

95% of all customers decide for one of these both options.

How to start Greenfield Projects: Use SAPs Predefined Content

Model Company and Best Practices

Start with SAP's Rich Best Practices

Early available in the project!

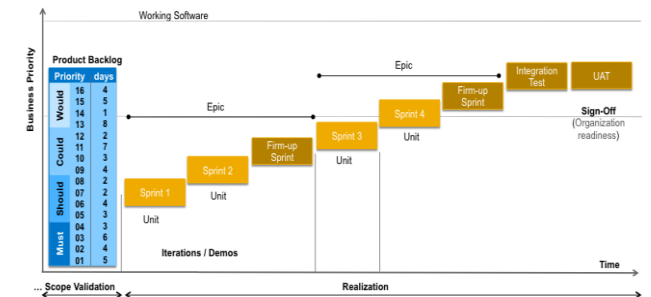

Solution Validation instead of traditional Business Blueprint

Fit/Gap workshops with customer at the steerwheel to drive priorities

Agile Build

Tailor the solution in short time-boxed sprints with frequent inspection points by the customer

- Import SAP BP processes and content (e.g. SAP Model Company)

- Model Business processes
- Collect Requirements for each gap / WRICEF
- Build a Work package backlog

- Define Waves & Sprints
- Break Down Work in Work items and tasks
- Perform short iterations of dev, config & testing

How to start Brownfield Projects: S/4HANA Conversion Project Support

Integration Readiness Check in Focused Build

SAP Readiness Check Analysis and Simplification Item Management

Analyse your existing SAP ERP Landscape

Analyse

usage and configuration
data of your current
landscape

Determine

conversion compatibility
and required preparation
steps

Access

results in interactive
dashboard for easy
analysis

Covered Aspects

Active Business Functions

Find out how many business functions are active in your system and whether they are compatible with SAP S/4HANA.

Add-on Compatibility

See how many add-ons are installed in your system and whether they are still compatible with SAP S/4HANA.

Recommended SAP Fiori Apps

Identify the SAP Fiori apps that best fit your needs based on your historical transaction volume and usage.

Business Warehouse Extractors

View how many extractors for SAP Business Warehouse exist in your ERP system and if they work with SAP S/4HANA.

Simplification Items for SAP S/4HANA

View new and updated data structures / architectures in SAP S/4HANA to determine if they are relevant to your processes.

Business Process Analytics

Analyse the state of your processes to determine any clean-up requirements before migrating to SAP S/4HANA.

Custom Code Analysis

Analyse the impact of custom code by knowing which SAP objects have been changed or removed in SAP S/4HANA.

SAP Custom Development Projects

View solutions built for your business by SAP Custom Development to evaluate if needed with SAP S/4HANA.

Data Volume Management

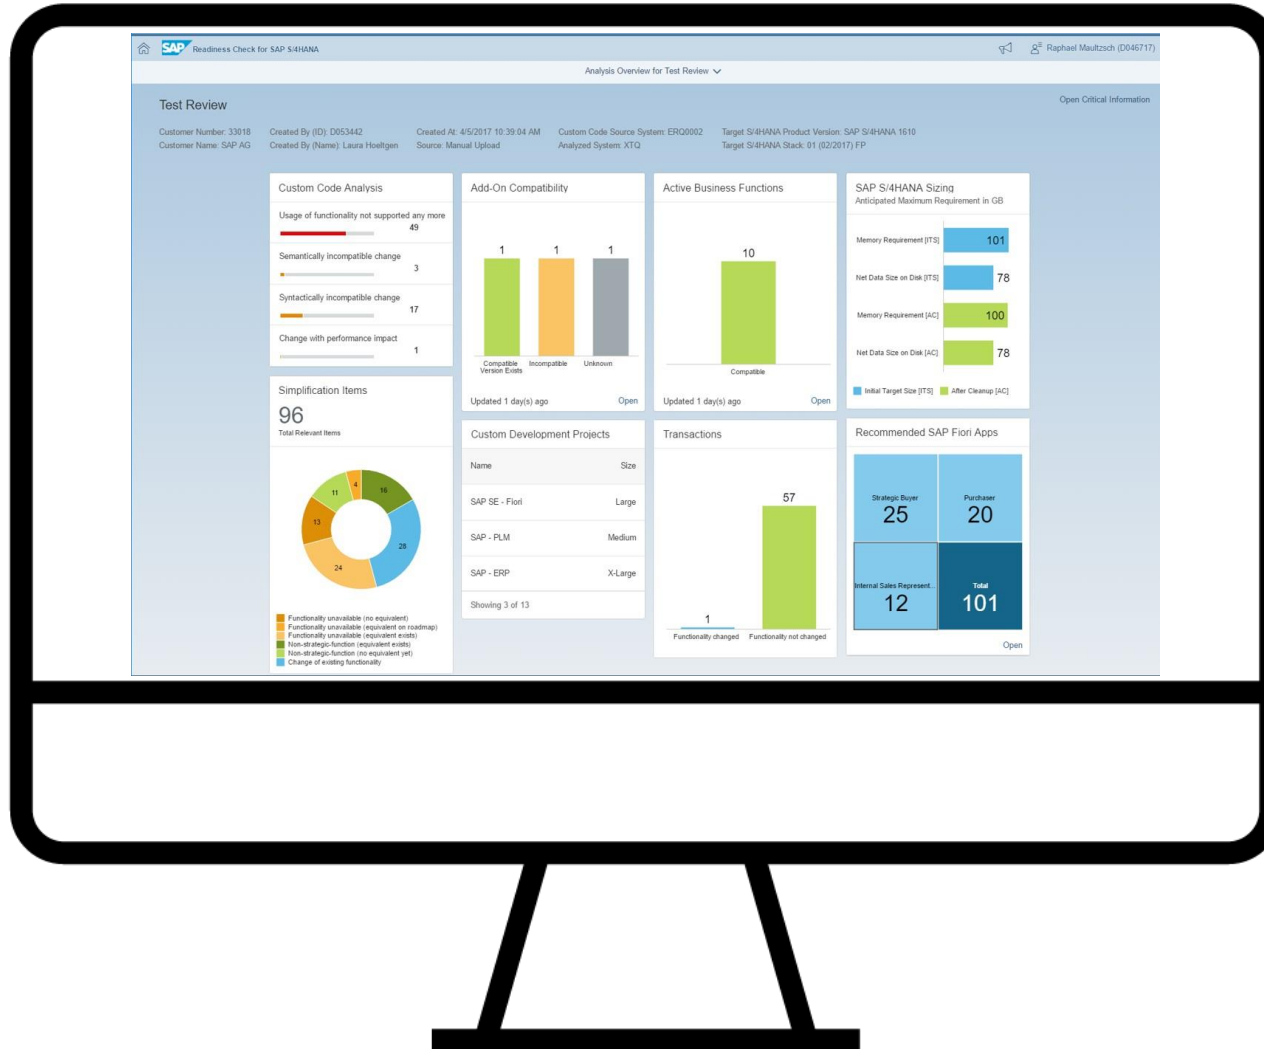

Plan for migration with insight into the size of your existing database and archiving potential for 12 or 24 months

Sizing for SAP S/4HANA

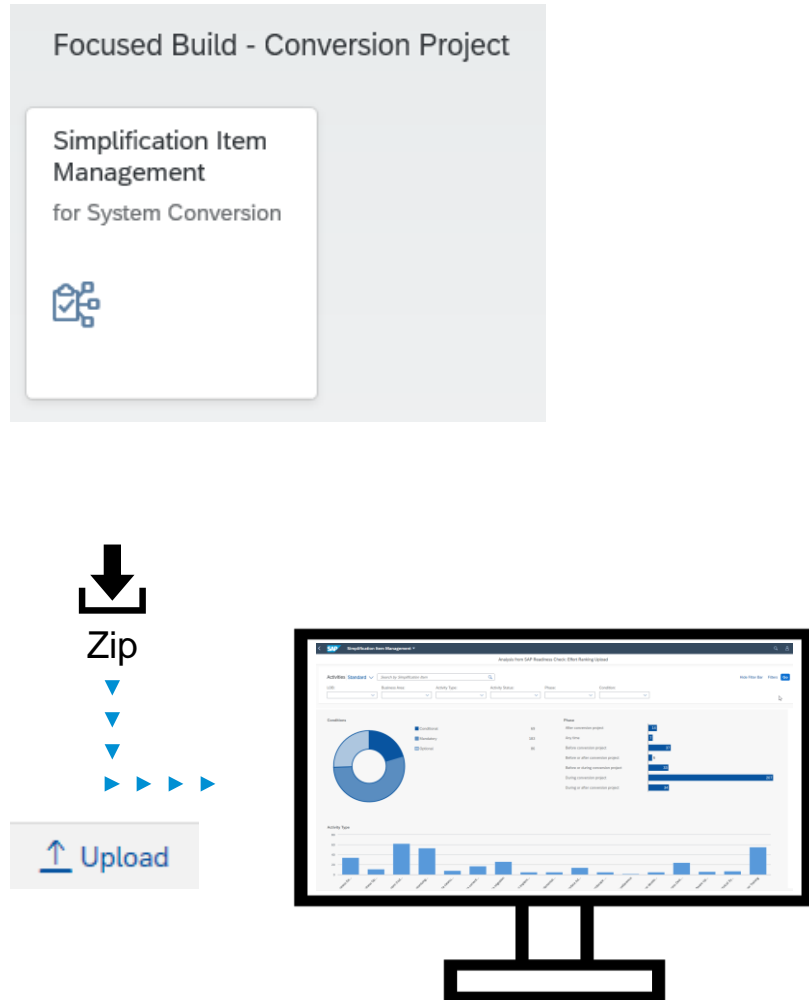

Estimate your sizing for the initial installation based on the existing system and after a data clean-up.

Interactive Dashboard shows Readiness Check Results

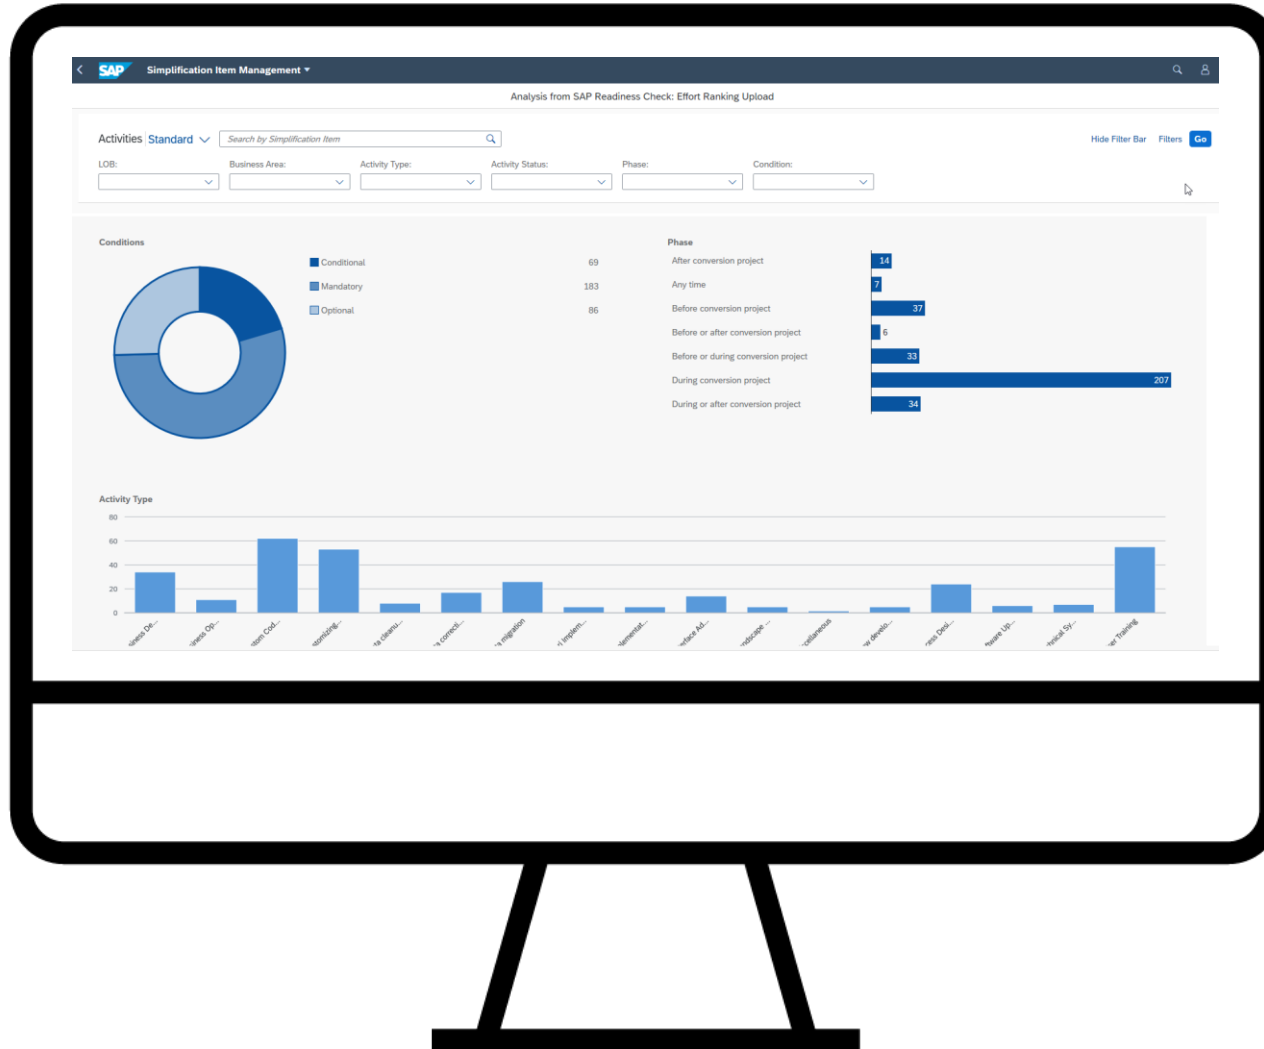

- Detailing the respective Activities related to each Simplification Item
- Categorizing Activities in mandatory, conditional or optional
- Sequencing Activities into project phases
- Integration with SAP ABAP Test Cockpit to visualize the detailed ATC analysis inside SAP Readiness Check 2.0
- When the Readiness Check is finalized it can be exported as zip-file

Upload of SAP Readiness Check in Focused Build

- The zip-file is used for importing the Readiness Check Result into Focused Build
- The Simplification Items and Activities are created in the background
- Related Information like Activity Type, LoB, Business Area or Manual Status are visible in the tool
- Is the starting point for the planning of the next project steps in Focused Build
- Direct creation of Requirements or Work Packages out of Activities or assignment of Focused Build Projects
- Tight integration in Focused Build Workflows with automatic status update

Simplification Item Management UI5 Application

- Graphical display of Simplification Items and related Conversion Activities by Condition, Phase, Type, Status and Follow-Up Type
- Table display with all Simplification Items and related Conversion Activities and their most-important information
- Powerful and fast multi-filter options
- Direct Creation of Follow-Up Requirements or Work Packages and Assignment of Focused Build Projects
- Postponement or Rejection of non-required Activities directly possible from the UI5 application

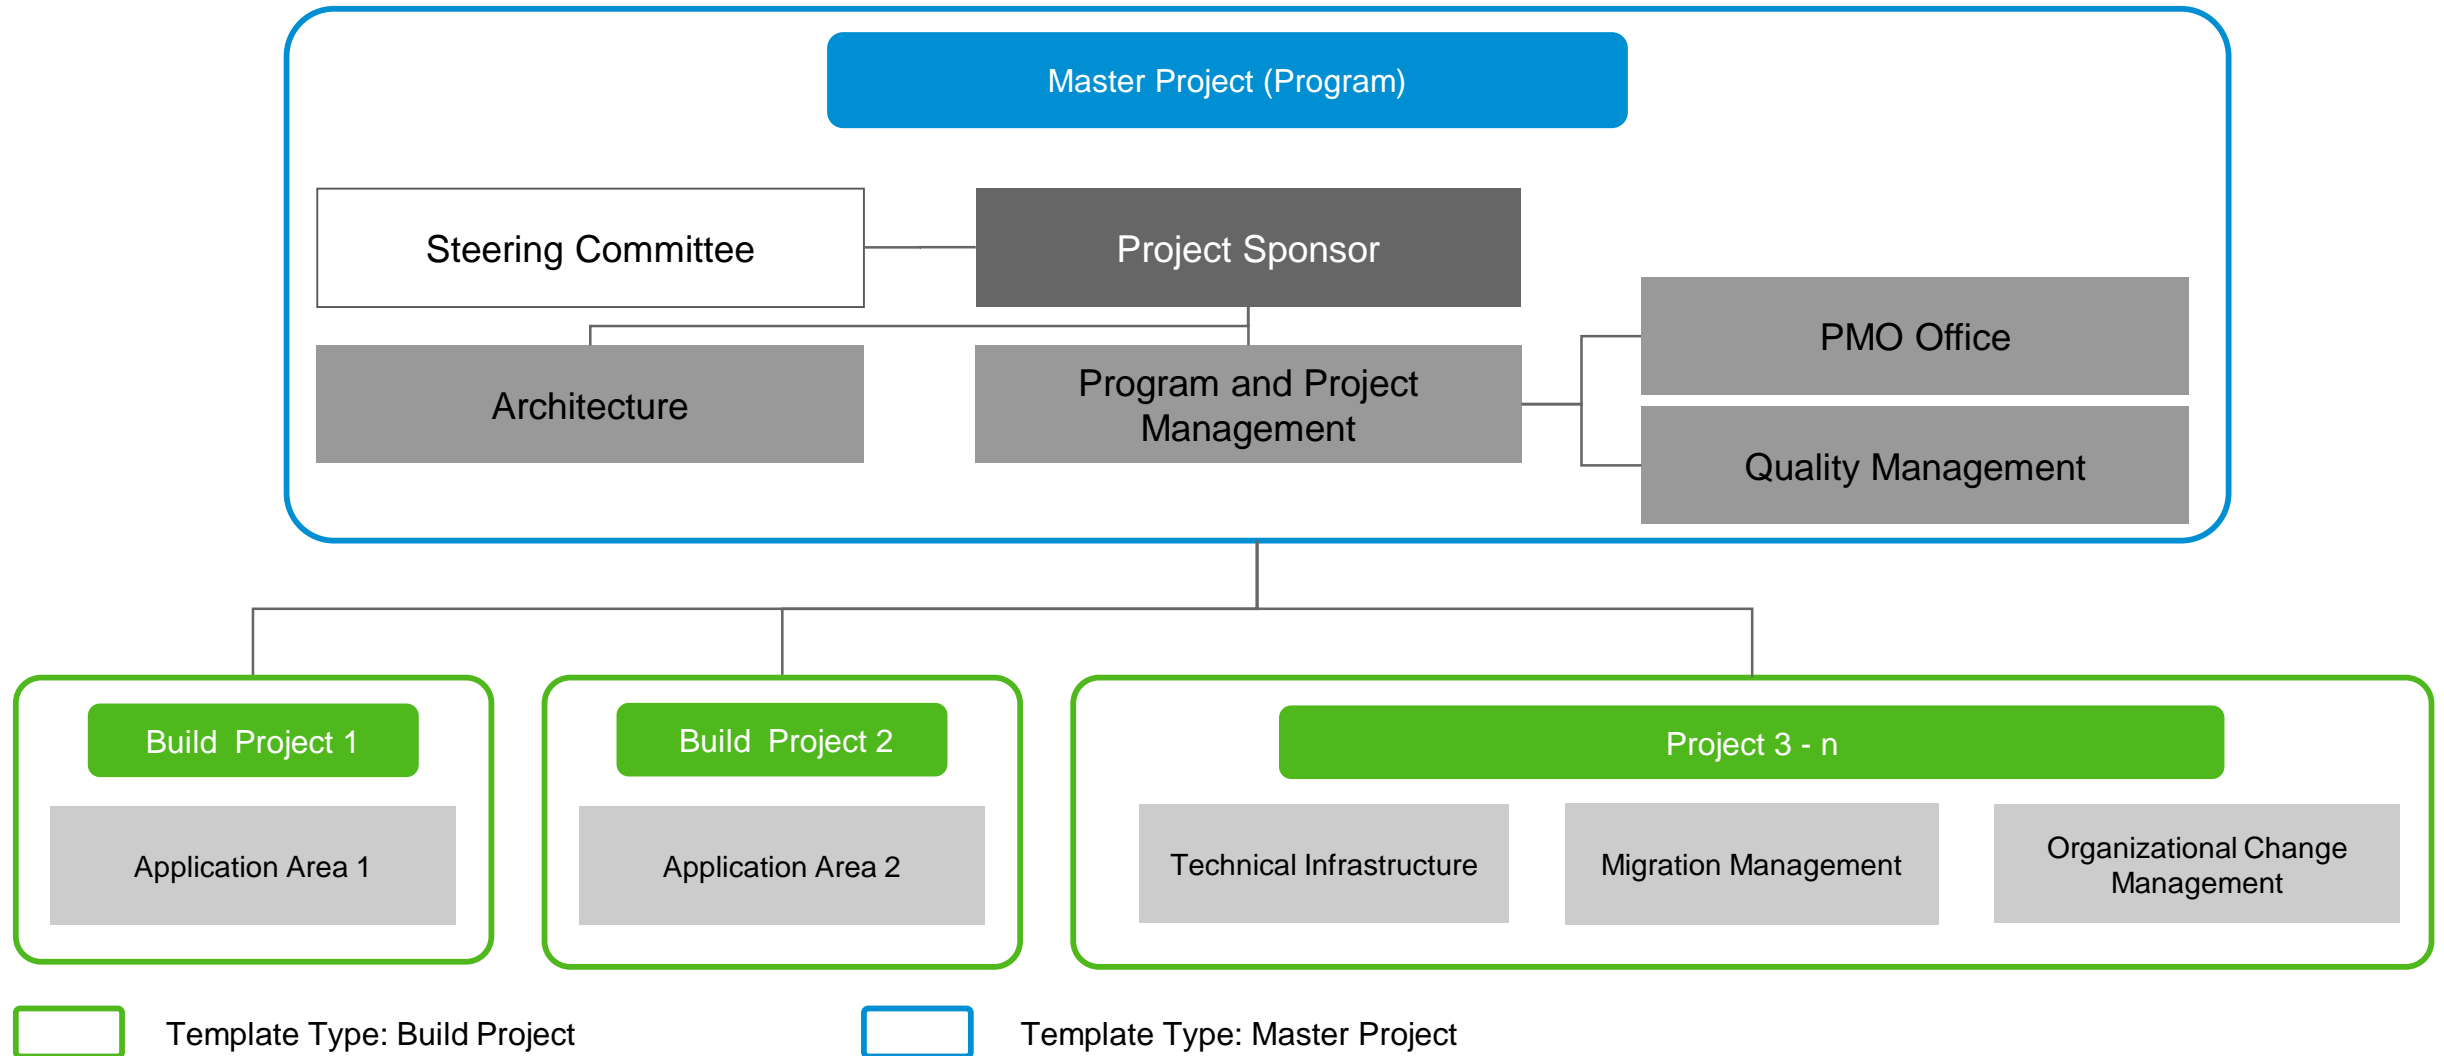

Demo

Upload a Readiness Check zip file to SAP Solution Manager and Simplification Item Management

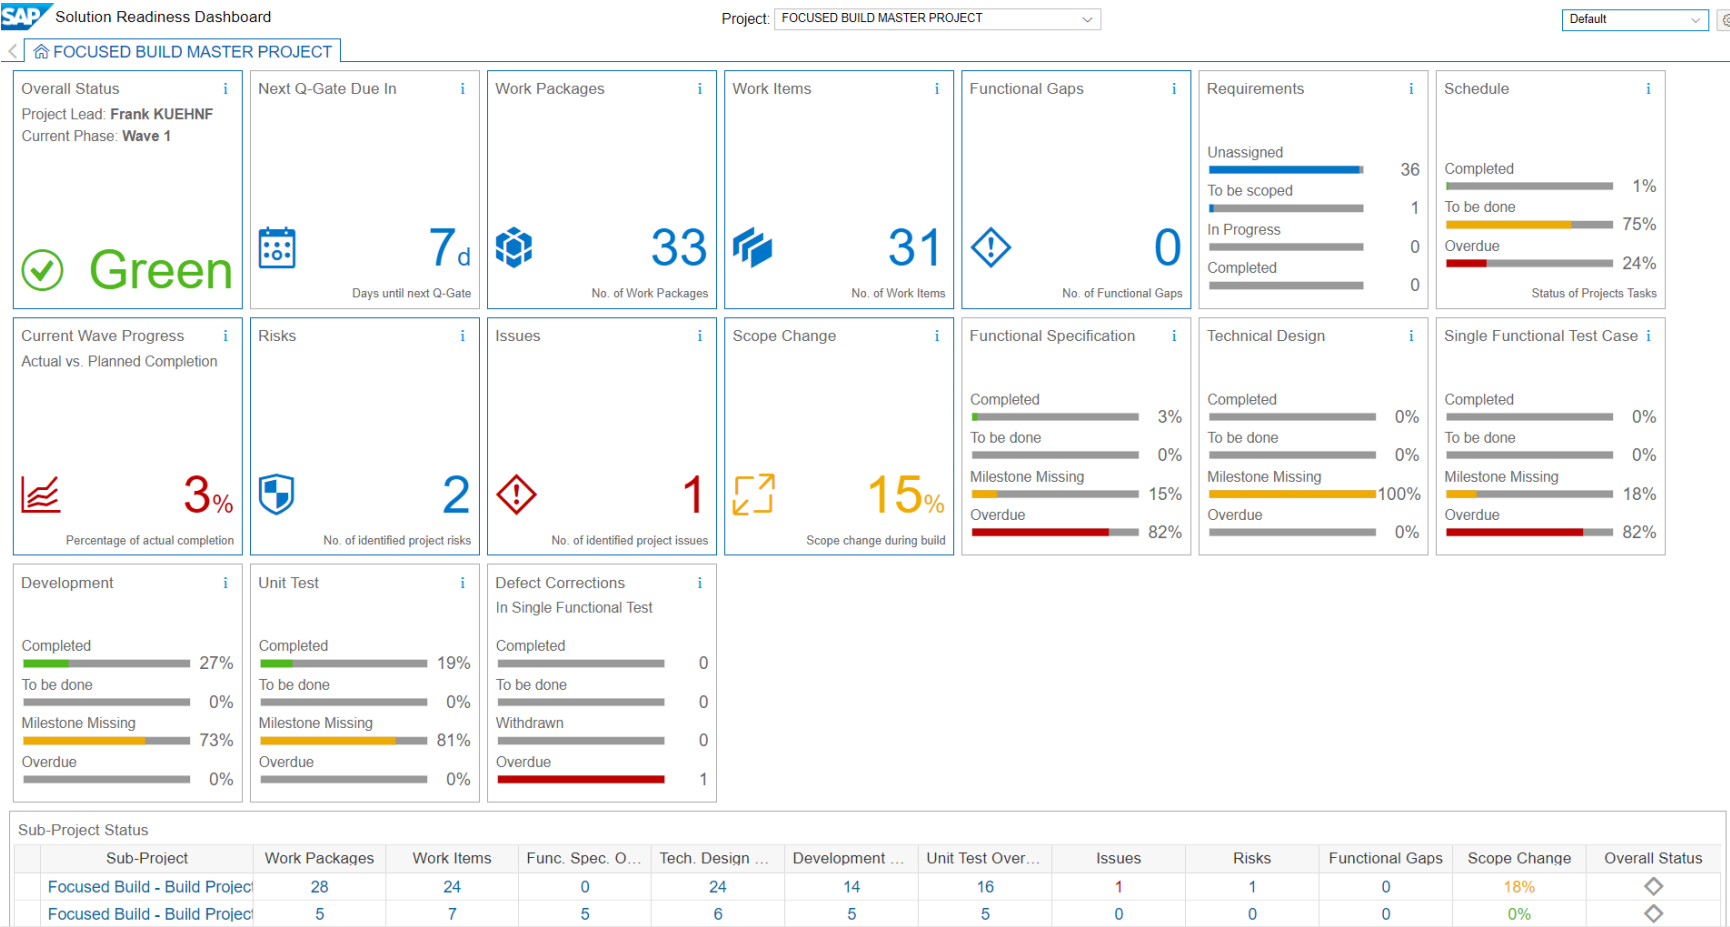

**Prepare your project
and run
Easy Project Setup
to create projects**

Project Organization Example Using Master / Build Projects

Solution Readiness Dashboard

Aggregated view for all Build-Projects assigned to Master Project

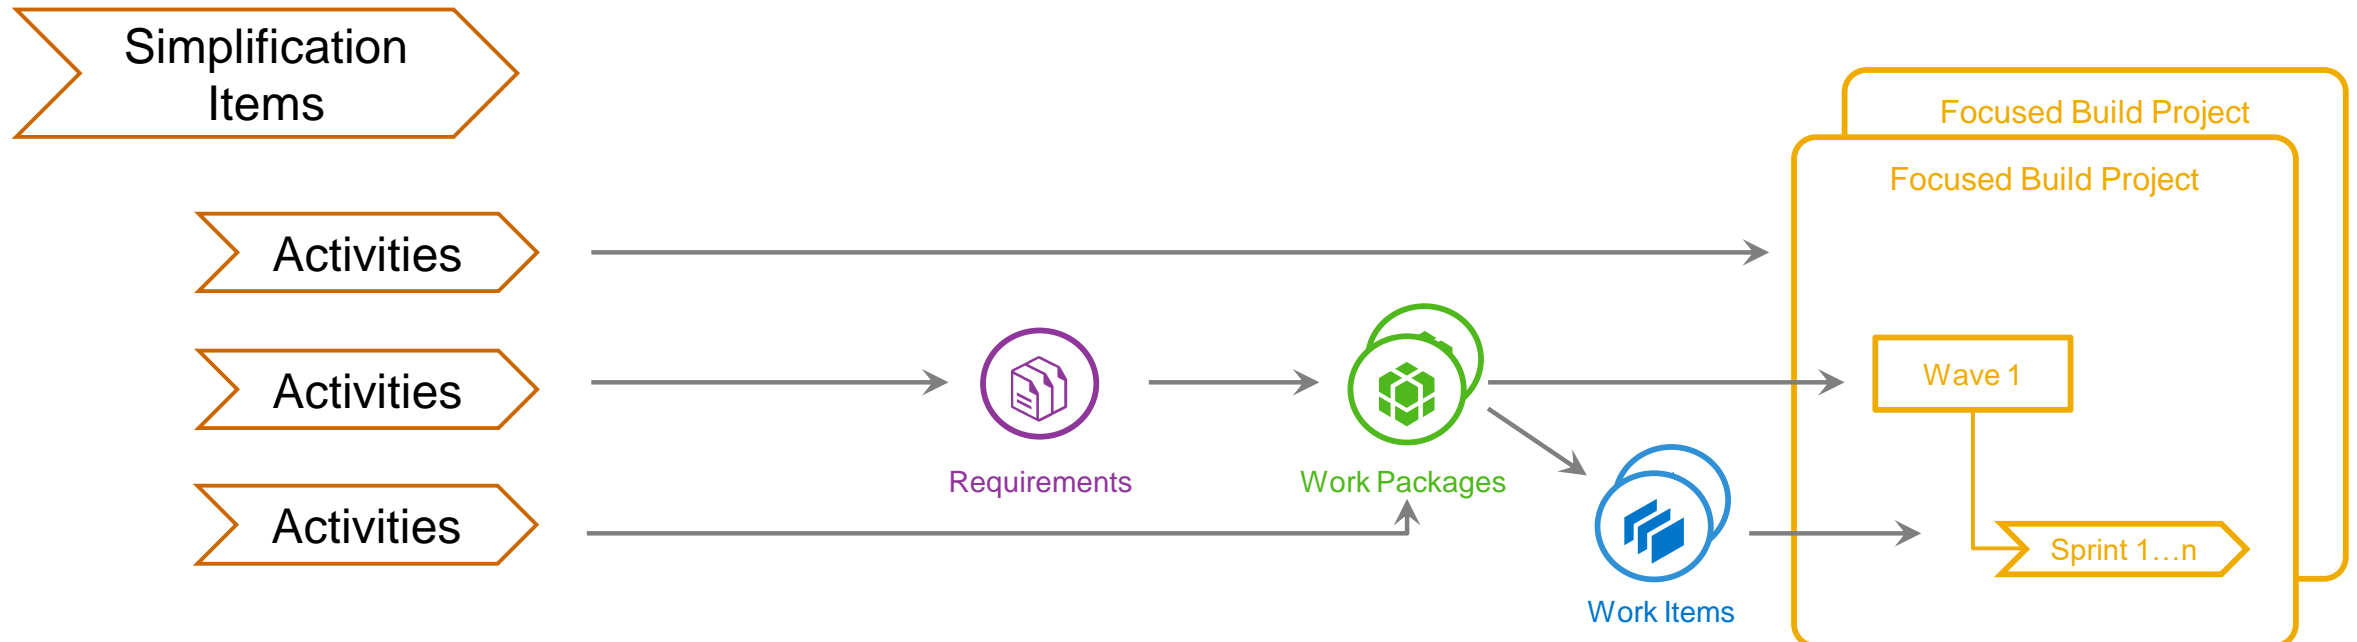

Aggregated data per Build Project

Agile Transition to SAP S4HANA powered by SAP Solution Manager

SAP Readiness Check

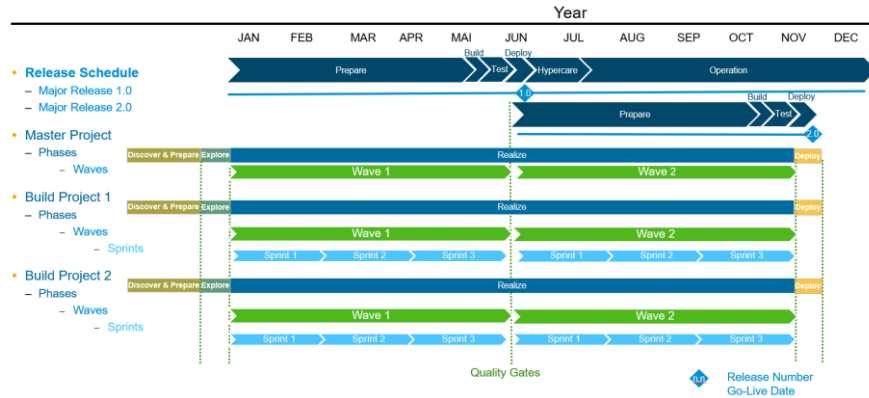

SAP Solution Manager – Focused Build

Project Planning

Options to create Focused Build Projects

Synced schedule across Master / Build projects or Single projects with continuous Waves and Sprints

Easy Project Setup*

* new with Focused Build SP06

Individual schedule per project with individual durations for Waves or Sprints

Manual Project setup

Easy Project Setup

Application

Easy Project Setup is a new wizard to create and schedule Focused Build projects

Feature details

Options to provide synchronous schedule for multiple Master/Build projects or Single project

- Synced timing of sprints, waves, phases and related Q-Gates / Milestones
- Release Assignment and Wave relationships

Benefits

Very efficient way to prepare your upcoming Focused Build projects

The screenshot displays the 'Easy Project Setup' wizard interface. At the top, a progress bar shows five steps: 1. Agile Project Approach (active), 2. Q-Gates and Milestones Approach, 3. Creation of Projects and Release Assignment, 4. Wave / Release Number Assignment, and 5. Project Naming and Creation for Master/Build.

1. Agile Project Approach

Sprints and Waves

- *Number of Weeks per Sprint: 4
- Weekday of Sprint Start: Monday (dropdown menu)
- *Number of Sprints per Wave: 4
- *Wave Duration: 112 Days Calculated
- *Number of Waves per Project: 4

Phases

- *Discovery & Prepare: 10 Days
- *Explore: 10 Days
- Realize (Based on Number of Waves): 448 Days Calculated
- *Deploy: 20 Days
- *Run: 10 Days
- Project Duration: 498 Days Calculated

Step 2

Cancel

Project & Release Management and Schedule

Project Phases

Project Management Structure and mapping to Releases

Synchronous project, wave schedule and release deployment

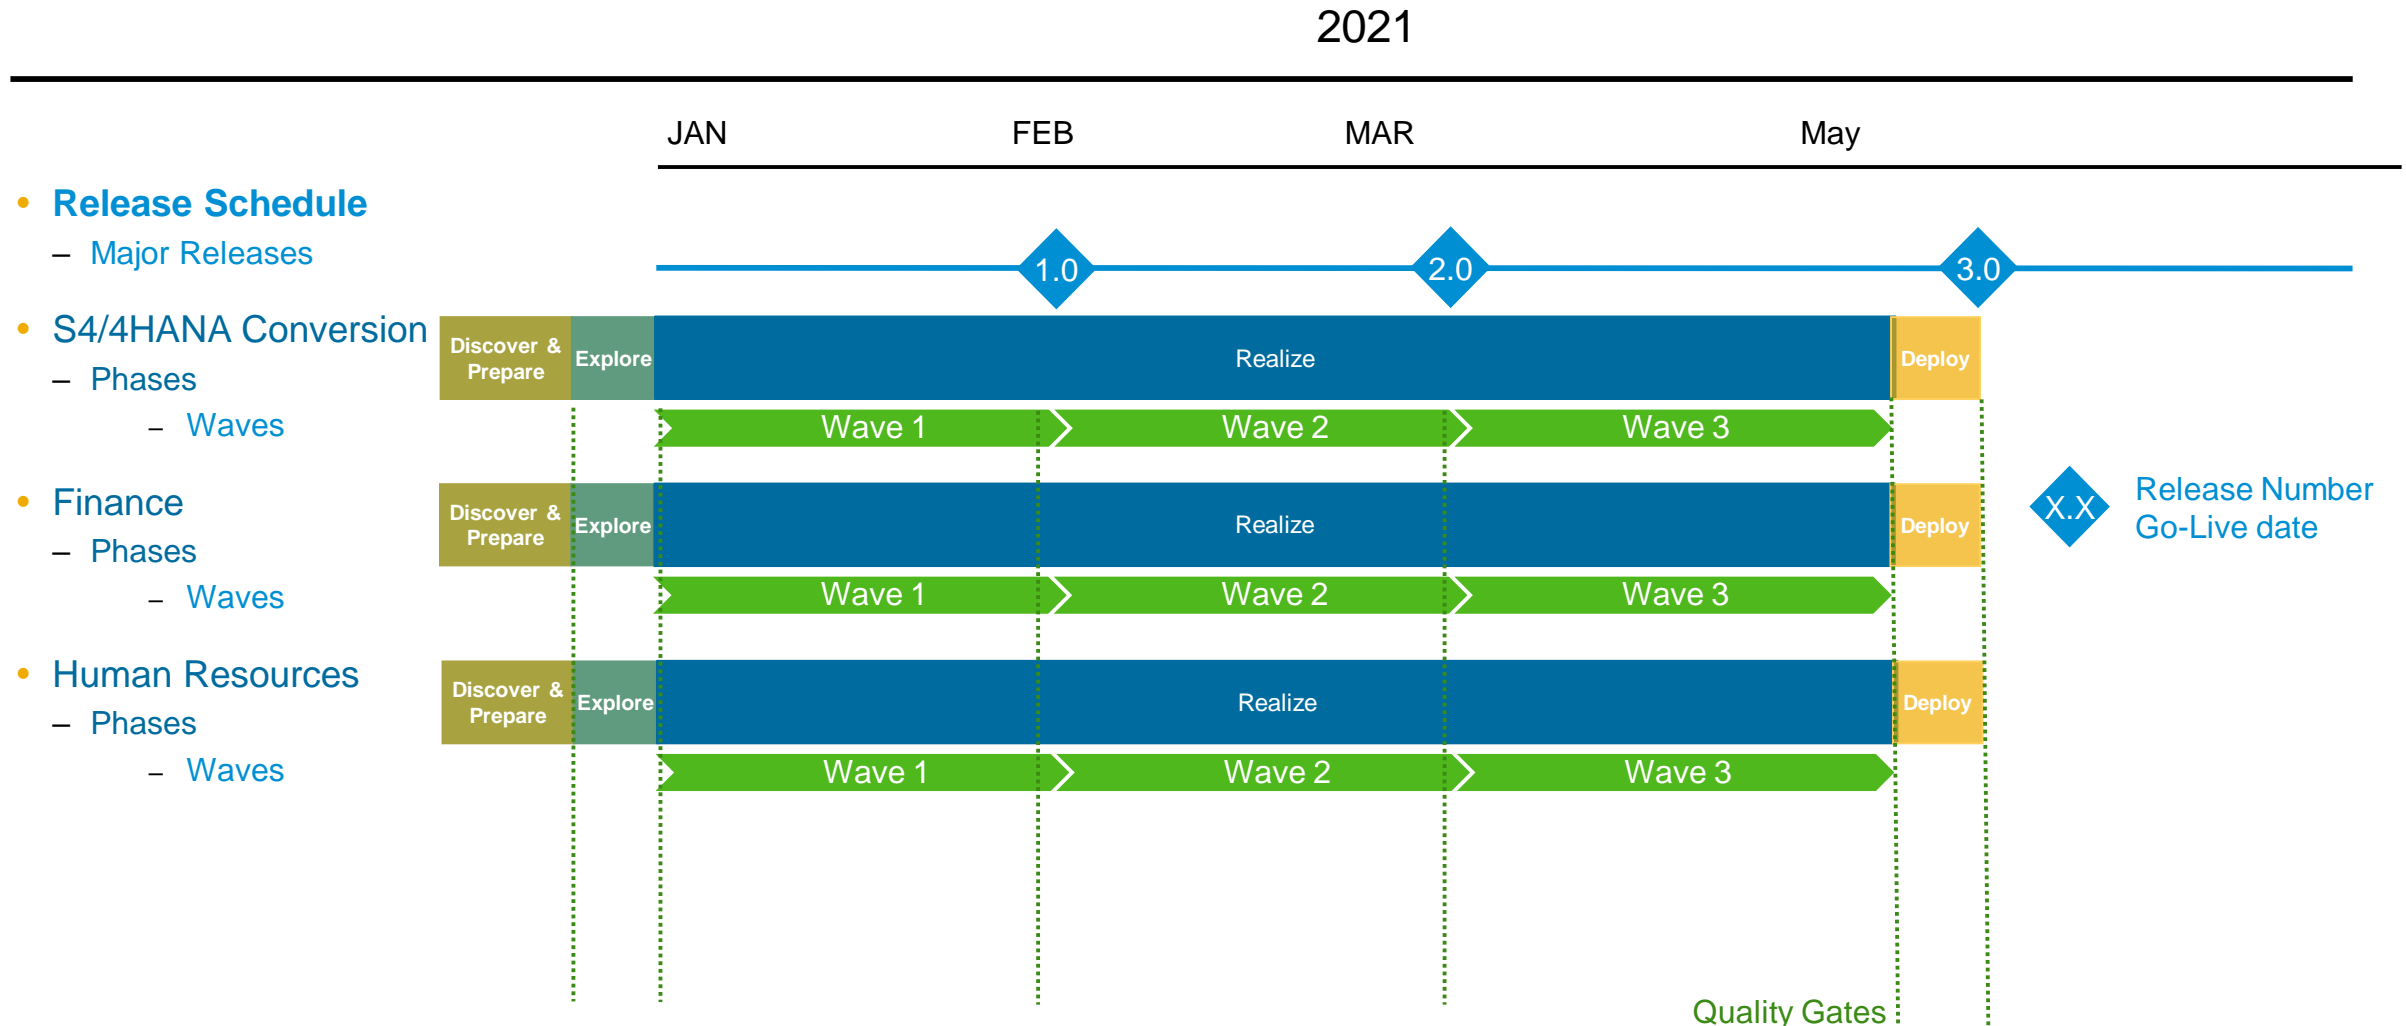

Standard Master / Build Project Structure:

	Master Project	Build Project 1	Build Project 2	Change Control Landscape / Release Cycles
Project Name	## S4/4HANA Conversion	## Finance	## Human Resources	S4_TECHED
Project ID	##_MASTER_S4HANA	##_BUILD_FINANCE	##_BUILD_HR	
Number of Weeks per Sprint	3			
Number of Sprints per Wave	2			
Number of Waves per Project	3			
Start date of Project	December 1, 2020			
Duration Discovery & Prepare phase (days)	14			
Duration Explore phase (days)	20			
Duration Realize phase (days)	126 (based on # of Waves/Sprints)			
Duration Deploy phase (days)	11			
Duration Run phase (days)	20			
Project/Wave/Release Mapping	Wave 1			1.0 (GoLive: February 15, 2021)
	Wave 2			2.0 (GoLive: March 29, 2021)
	Wave 3			3.0 (GoLive: May 21, 2021)

Please replace ## by suffix of your User ID during exercise

Visualized schedule of Releases, Projects, Waves

Example: Synchronous project, wave schedule and release deployment

Project Q-Gates & Milestones

Q-Gates	Dates
Phases	2 days before end of Phase
Waves	2 days before end of Wave

Wave Milestone	Sprint Milestone	Dates
Functional Specification released		5 days after Wave start
Work Package build completed		10 days before Wave end
Single Functional Test completed		7 days before Wave end
	Technical Design available	5 days after Sprint start
	Work Item Build started	7 days after Sprint start
	Work Item Build completed	5 days before Sprint end
	Unit Test completed	2 days before Sprint end

To define the Initial Backlog Change the Requirement Status to 'Approved'

Define Product Backlog

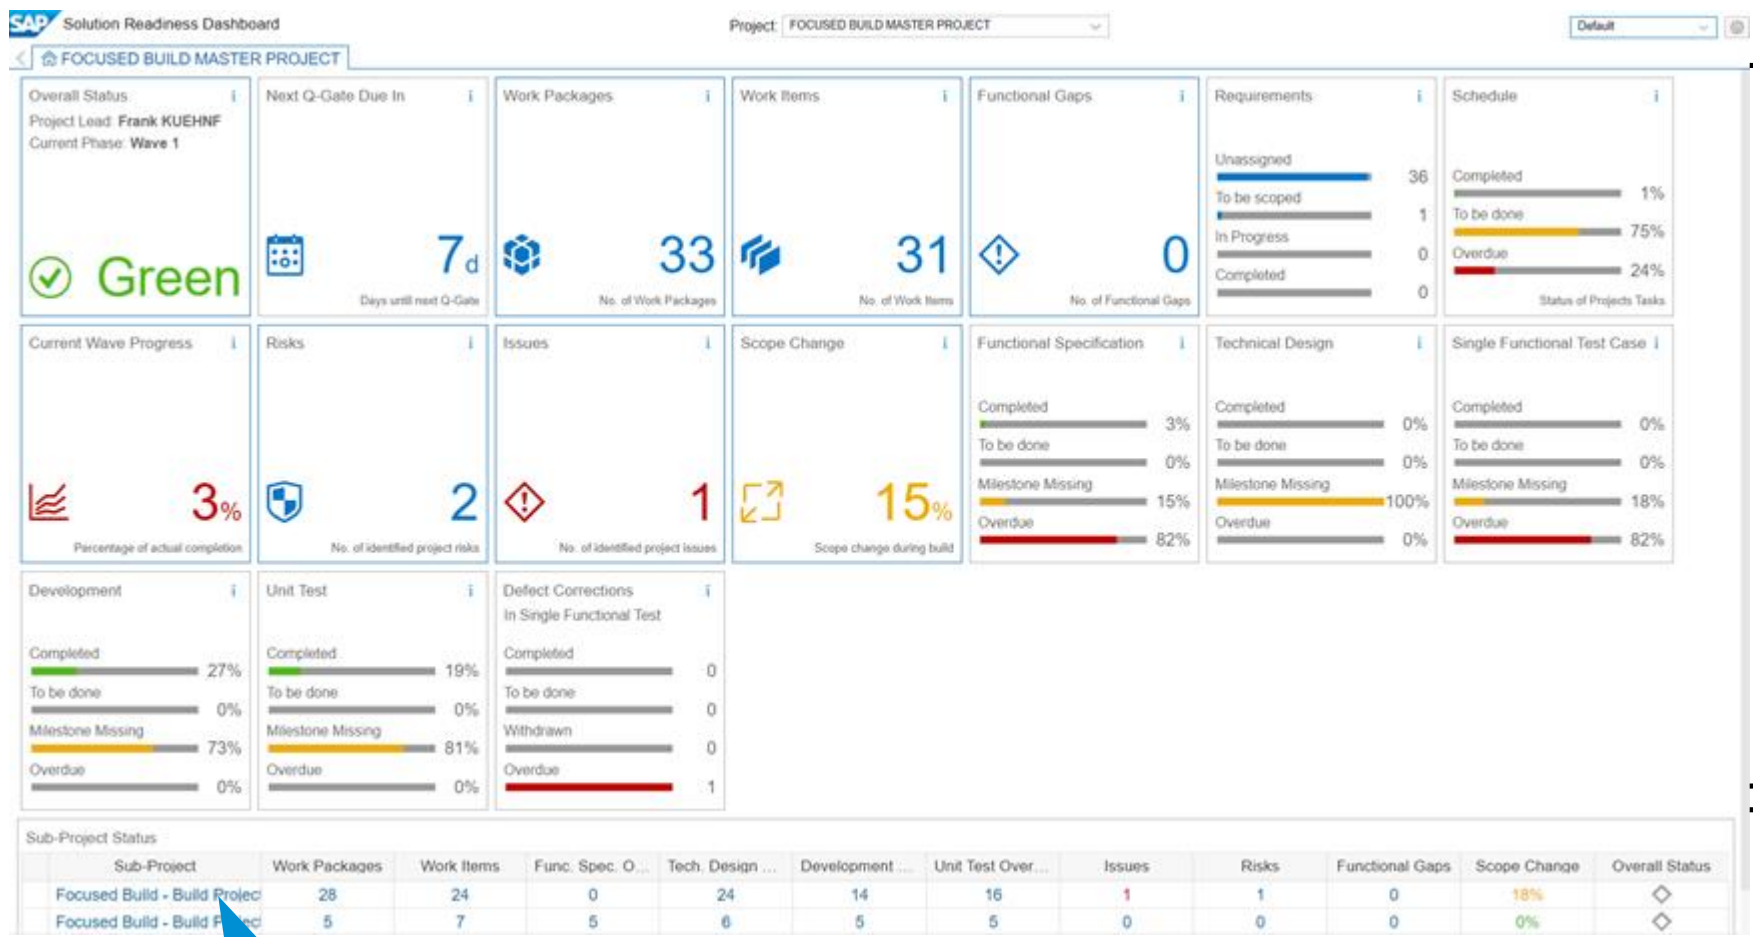

Example: Use Mass Change Operations to define the Scope of the first Wave

The screenshot displays the SAP S/4HANA Project Management interface. At the top, the 'Mass Change' dialog is open, showing a dropdown for 'Work Package'. Below this, a list of work packages is shown with columns for ID, Title, Priority, Status, Project Name, Wave, Owner, WP Classification, Effort Points, and Value Points. A red box highlights the 'Project' dropdown in the 'Mass Change' dialog, which is set to 'RM_FB_BUILD1_SP03'. A blue callout bubble points to this dropdown with the text 'Select the (Build) Project'. Another red box highlights the first four rows of the work package list, which are selected. A blue callout bubble points to these rows with the text 'Select all Work Packages to be part of the Wave'. A yellow arrow points from the 'Wave' column of the selected work packages to the 'Wave' dropdown in the 'Mass Change' dialog, which is set to 'Wave 1'. A blue callout bubble points to this dropdown with the text 'To define the Product Backlog select the Wave'. The 'Mass Change' dialog also shows fields for 'From Status' (Created), 'To Status', 'Priority', 'Category', 'Partner Function', 'Partner Name', 'Date Type', and 'Date'.

How to do project reporting with Focused Build

Solution Readiness Dashboard – Master Project

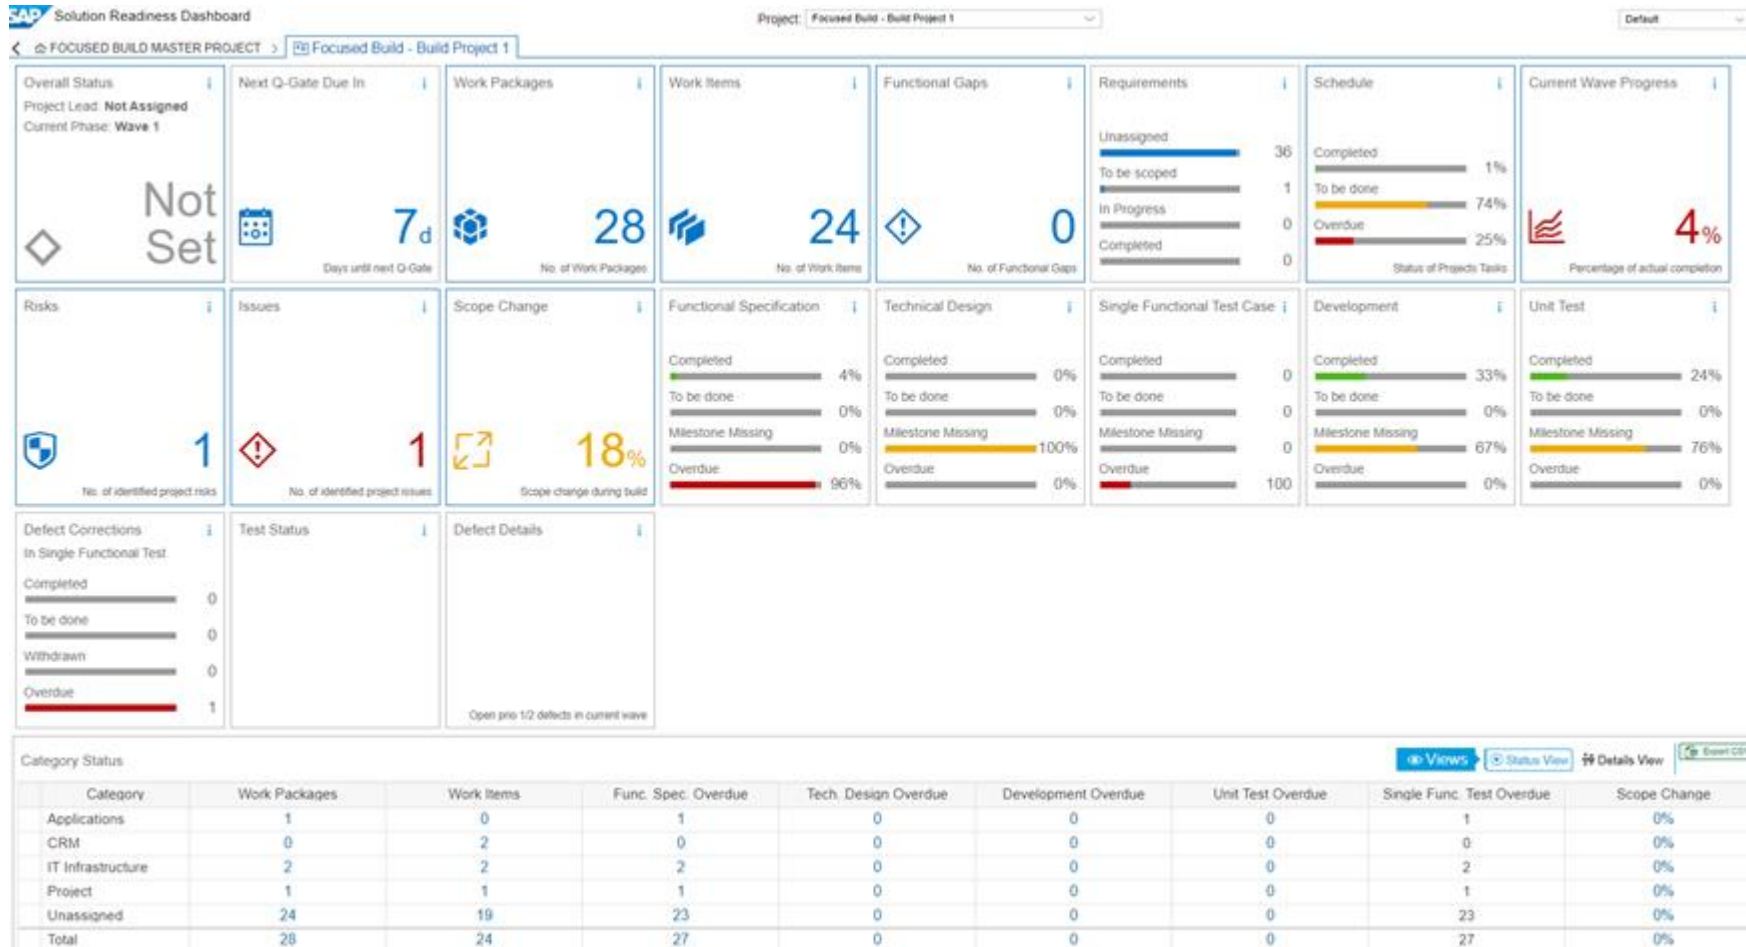

Aggregated data for all Build-Projects assigned to Master Project

Aggregated data per Build Project

Select Build Project

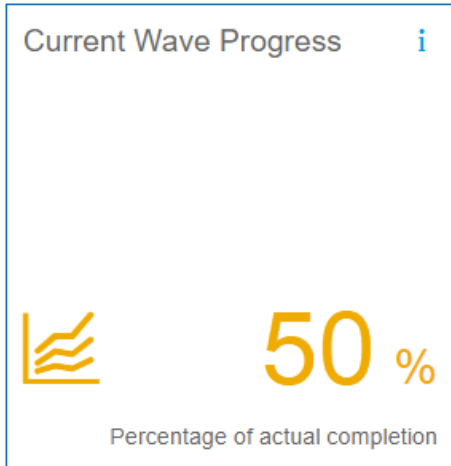

Solution Readiness Dashboard – Build Project

Aggregated for selected Build-Project

Aggregated data per Category

Current Wave Progress tile

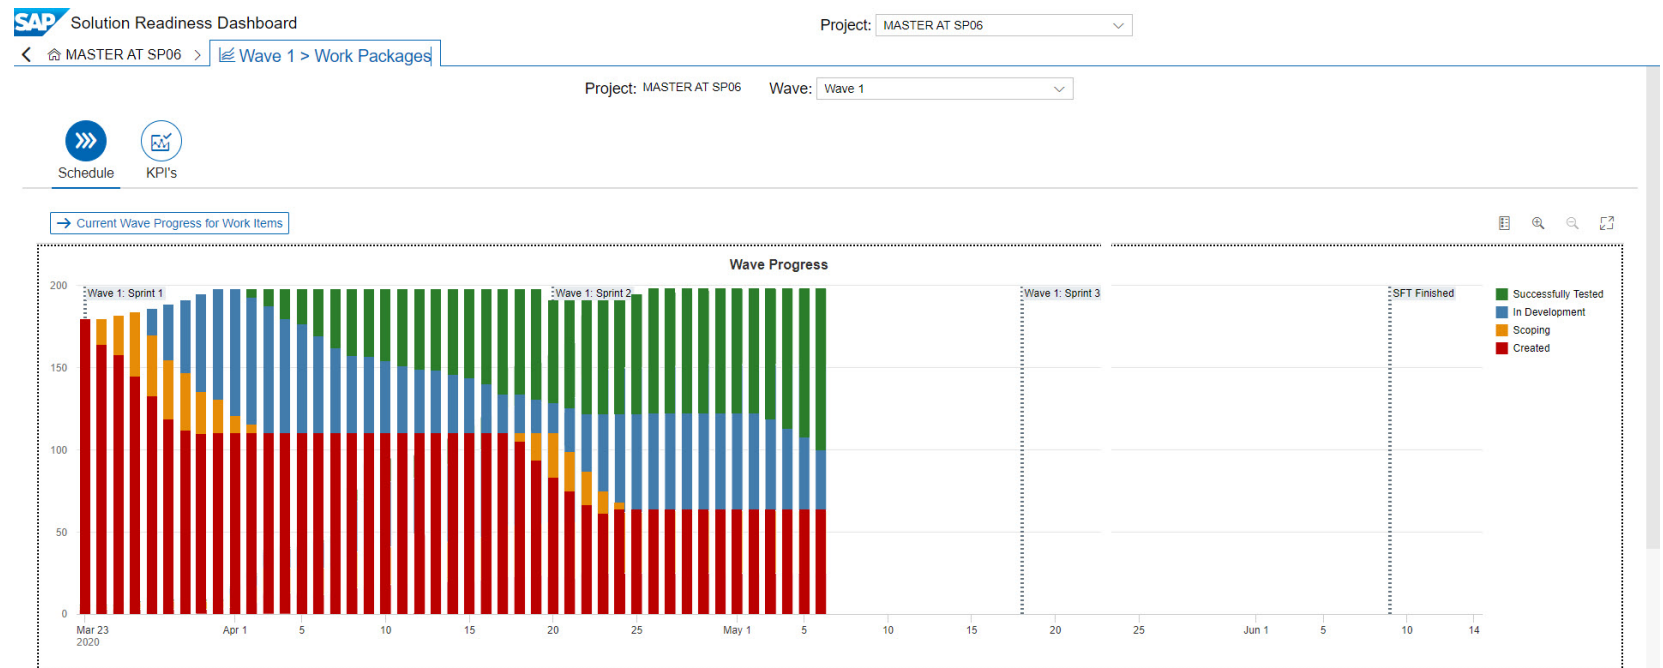

Work Packages status values are aggregated:

- Successfully Tested:** Successfully Tested, Handed over to Release, Productive, Complete
- In Development:** To be Developed, In Development, In Repair, To be Tested
- Scoping:** Scoping, Scope Finalized, Scope Extension
- Created:** Created

Progress of work packages assigned to current wave.

The **Schedule** tab visualize the progress of the work packages of a current or selected wave. Timeline of sprints and Milestone for Single Functional Test. You can also display the progress for work items choosing by [Current Wave Progress for Work Items](#) and if needed drill down to Sprint level.

The **KPIs** tab shows the ratings for status and documentation of work packages

Current Wave Progress tile – Details about Work Items

(new with Focused Build SP06)

Progress of work items assigned to current wave.

View progress of the work items of a current or selected wave with timeline of sprints and milestone for Single Functional Test. If you select dedicated Sprint the milestone for 'Unit Test Completed' is displayed.

Work Item status values are aggregated:

Successfully Tested: Successfully Tested,
Handed over to Release,
Productive, Completed

In Development: To be Developed, To be Tested

Created: Approved, Created
